

CHECK THE STATUS OF YOUR PLANT  
WITH SAFETY CHECKPOINT™

# Safety Checkpoint™

# Safety Checkpoint™

## Industrial safety concept

We work closely with industrial plant owners and management in order to assess the risks, implement corrective actions and follow-up on end results. Practical recommendations bring new efficiencies that also boost productivity. Hazards are not always easy to detect. Is it time to check the status of your plant's safety?

### ENSURE THE OPTIMAL OPERATIONAL SAFETY OF YOUR INDUSTRIAL PLANT

Constant changes in legislation, regulations and general trends in the business environment call for special safety actions. Companies with up-to-date corporate safety evaluate their safety culture and the performance of their process safety management systems regularly. Preventing process accidents requires alertness and best practises. Injuries and lost work-days caused by accidents not only damage a company's reputation. They also have the potential to impair employee well-being and cause serious environmental harm.

Safety Checkpoint™ ensures that the optimal operational safety of your industrial plant is reached. The Safety Checkpoint™ considers all risk factors: occupational, environmental and financial.

### INDUSTRIAL SAFETY CONSISTS OF SEVERAL FUNCTIONS:

- Safety management
- Risk management
- Chemical safety
- Process safety
- Occupational health and safety
- Fire prevention
- Environment safety

### WHY PÖYRY?

- Industrial operator with technical know-how
- One-stop shop that provides all services, from auditing to implementation. One partner in all fields of industrial safety
